J-1 Student Intern / Visiting Undergraduate Researcher, University of Illinois Urbana-Champaign

Education

University of Illinois Urbana-Champaign, USA

May 2026 – Present

J-1 Student Intern / Visiting Undergraduate Researcher, Siebel School of Computing and Data Science

Zhejiang University, China

Sep. 2023 – June 2027 (expected)

Bachelor of Computer Science; Cumulative GPA: 4.09/4.3 (Top 25%)

Research Interests

My research focuses on scaling and optimizing generative foundation models across modalities. I am particularly interested in the intersection of structured reasoning and generative modeling, including efficient decoding, test-time scaling, physically consistent video generation, and latent representation learning. My goal is to develop robust, high-fidelity generative frameworks that maintain spatial-temporal consistency and logical integrity in complex inference tasks.

Research Experiences

University of Illinois Urbana-Champaign

May 2026 – Present

Research Intern (Advisor: Prof. Yuxiong Wang)

- **Physics-Aware Video Continuation** – Ongoing
 - Developing a prefix-conditioned video continuation pipeline to study how structured predictions of scene dynamics can guide future-frame generation.
 - Implementing teacher-supervised fine-tuning of a vision-language reasoner using full-window video annotations, while restricting its inputs to observed prefixes and prefix-derived captions.
 - Conducting controlled experiments to distinguish errors in prefix perception, future-event prediction, and video synthesis, using matched generation settings and event-level evaluation.

State Key Lab of CAD & CG, Zhejiang University

2024 – Present

Undergraduate Researcher (Advisor: Prof. Chunhua Shen, Research Prof. Hao Chen)

- **Efficient Decoding for Diffusion Language Models (DLM)**
 - Spearheaded the technical implementation of the Order-Token Search algorithm and its core likelihood estimator, ensuring efficient pruning and stable exploration across diverse decoding trajectories.
- **High-Fidelity 3D Content Generation and Editing**
 - Contributed to **TINKER**, a generalizable 3D editing framework that achieves state-of-the-art performance without per-scene optimization (*ICLR 2026*).
 - Conducted **extensive benchmarking** to evaluate the framework's performance in one-shot and few-shot regimes, providing critical experimental evidence for model validation.

Skills

Programming: Python, C++, Java, Verilog, Shell, ~~W~~TeX;
Frameworks: PyTorch, Verl.

Honors & Awards

Zhejiang University Academic Excellence Scholarship 2024, 2025
Awarded to the top 20% of students for outstanding academic and research performance.
